

MICROPUB ROCKS!

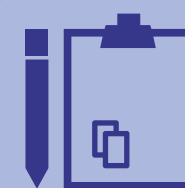

Publish

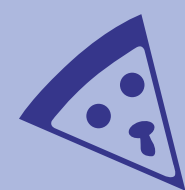

Freedom

Decentralisation

Web apps and native apps (e.g. iPhone, Android) can use **Micropub** to post and edit articles, short notes, comments, likes, photos, events or other kinds of posts on your own website.

You no longer need to be responsible for creating posting UIs.

You can simply use other clients and UIs, e. g.

Webcomponents.

Consume the normalised API with any Interface :

Create posts with Quill, publish audio with Screech or own your instagram with OwnYourGram

Micropub is used to create, update & delete things. You tell a story in Syria and submit it to NYT. Some editors review or enrich the material and publish it to their public channels. Readers can reply with a comment which is published on their pages too.
